Logistic regression

Predict binary outcomes (success/failure) from numerical or categorical predictors.

Linear vs. logistic regression

Linear regression:

$$y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots + \beta_n x_n + \varepsilon$$

Linear vs. logistic regression

Linear regression:

$$y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots + \beta_n x_n + \varepsilon$$

Logistic regression:

$$Pr(success) = \frac{e^t}{1 + e^t}$$
$$t = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots + \beta_n x_n + \varepsilon$$

Linear vs. logistic regression

Linear regression:

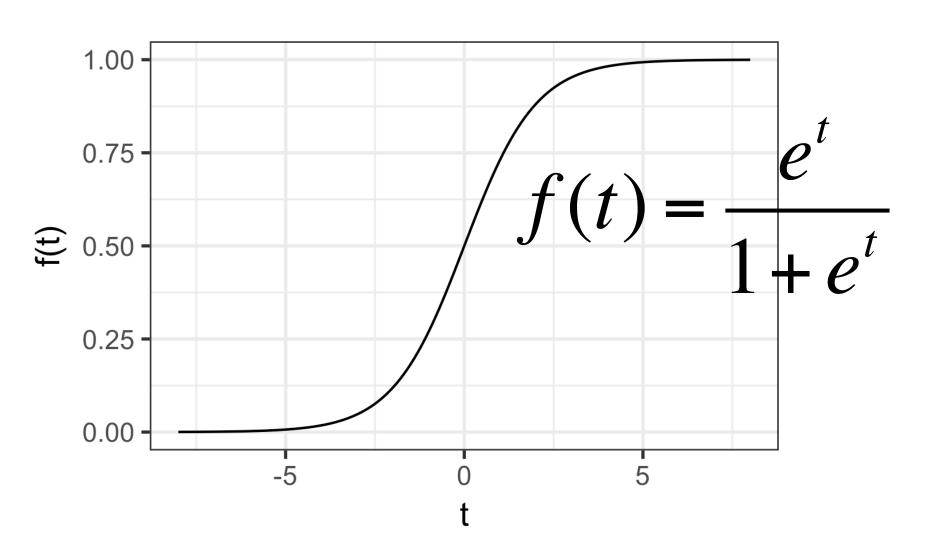

$$y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots + \beta_n x_n + \varepsilon$$

Logistic regression:

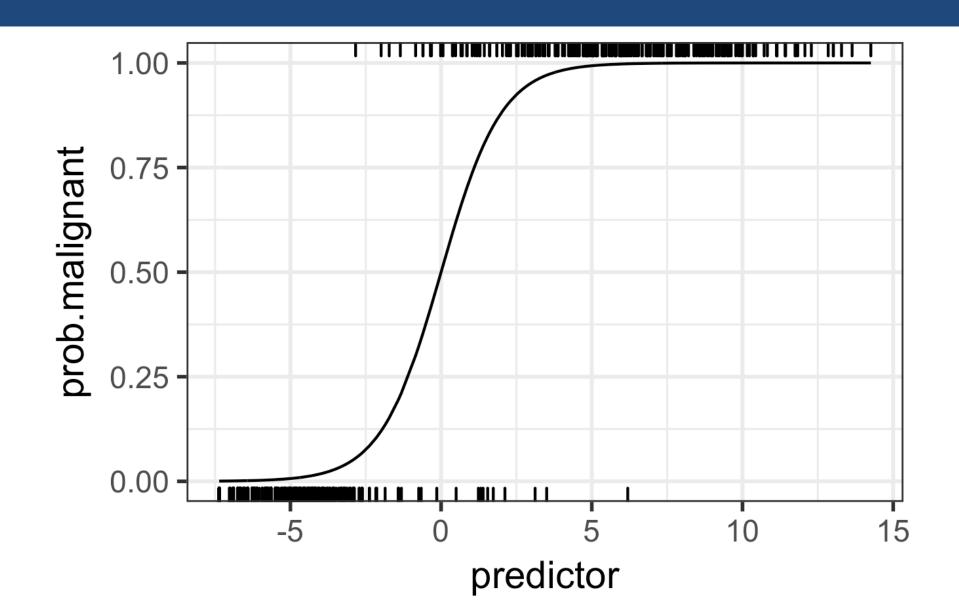

$$Pr(success) = \frac{e^t}{1 + e^t}$$
$$t = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots + \beta_n x_n + \varepsilon$$

(generalized linear model, GLM)

The logistic equation

Example: Pr(malignant) in biopsy data set

Let's do this step by step...

Recall the biopsy data set

```
clump_thickness uniform_cell_size uniform_cell_shape marg_adhesion
5
                                  10
                                                      10
 epithelial_cell_size bare_nuclei bland_chromatin normal_nucleoli mitoses
                                 10
                                 10
    outcome
     benign
    benign
    benign
     benign
    benign
6 malignant
```

We do logistic regression with the glm() function

```
> glm out <- glm(</pre>
    outcome ~ clump thickness +
      uniform cell size +
      uniform cell shape +
      marg adhesion +
      epithelial cell size +
      bare nuclei +
      bland chromatin +
      normal nucleoli +
      mitoses,
    data = biopsy,
    family = binomial
```

```
> summary(glm out)
```

Call:

```
glm(formula = outcome ~ clump_thickness + uniform_cell_size +
    uniform_cell_shape + marg_adhesion + epithelial_cell_size +
    bare_nuclei + bland_chromatin + normal_nucleoli + mitoses,
    family = binomial, data = biopsy)
```

Deviance Residuals:

```
Min 1Q Median 3Q Max -3.4841 -0.1153 -0.0619 0.0222 2.4698
```

Coefficients:
